PräziBand

Headbanding machine

The **PräziBand** is designed to quickly and easily apply headband to book blocks.

The headband is applied automatically to the inserted book block by means of double-sided adhesive tape.

The principle of operation

After the machine has been equipped with double-sided tape and the headband required,

the width of the book block is measured and entered into the machine's control panel. The headband is guided automatically into the intake slot while being equipped with double-sided adhesive tape.

The book block is now placed into the intake slot against the stop and pressed down slightly, so that the headband sticks to head of the book block. By pressing the foot pedal, the headband is cut off at the pre-selected width. The block is now taken out. The next piece of headband is equipped with double-sided tape and forwarded into the slot. Now the next book block can be inserted and/or headband attached to the foot of the block just taken out.

Technical data:

Floor space:	69 x 29 cm	Book block sizes:	
Height:	42 cm	Width:	75 - 320 mm
Weight:	ca. 25 kgs	Height:	100 - 450 mm
Power supply:	230 V - 50 Hz (A. C.)	Thickness:	3 - 79 mm
Air pressure:	6 bar	Output:	max. 360 cycles / h

Recommended consumables:

- **PräFix 700** Double-sided adhesive tape in 9 mm width (item no. 32951009)
- Machine headband (item no. 5022-XXX)

Subject to technical alterations.
